The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply								
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### **DETAILED ACTION**

## Information Disclosure Statement

- 1. Two documents were noted in the application file but are not listed on an information disclosure statement. The two documents as follows:
- (1) Hopwood, J. D. and S. Mann, Synthesis of Barium Sulfate Nanoparticles and Nanofilaments in Reverse Micelles and Microemulsions, Chem. Mater., Vol. 9, (1997), 1819-1828.
- (2) Mann, S., B. Heywood, S. Rajam, J. D. Birchall, Controlled Crystallization of CaCo3 under stearic acid monolayers, Nature, Vol. 334, (1998), pages 692-695.

Applicant is requested to clarify whether these documents are intended to be part of the record by submission of an information disclosure statement.

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Please list all U.S. Patent references cited in the body of the text in an information disclosure statement.

# Specification

3. On page 11, Example 10, the disclosure indicates that formation of platinum crystallites occurs by dissolving <u>platinum</u> chloride and subsequent precipitation (Page 11, lines 18-22).

Note, however, that <u>gold</u> crystals are collected at the end of the process (Page 11, lines 27-28).

Appropriate correction is required. Other examples have not been checked in detail to ensure

Art Unit: 1732

that they are correct, however, Applicant is encouraged to review the disclosure for any other errors.

### Claim Objections

4. Claim 1 is objected to because of the following informalities: Note "...column to to a reducing..." in line 6. Appropriate correction is required.

### Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. As to Claim 1, the portion of line 1 which recites particular sizes of particles in indefinite because it is unclear if these are claimed sizes or merely examples of the desired range. Because particular particle sizes are claimed in Claims 7 and 8 (claim 8 being redundant with regard to the particle size range recited within the parentheses), the size limitation has not been treated as part of the claim.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Steinus (USPN 4425261) in view of Menon (USPN 4920083). As to Claim 1, Steinus teaches a process for the preparation of micron/nano sized inorganic particles (2.5 nm, 4: 55) using aqueous solutions which comprises mixing an aqueous solution of a base inorganic salt (2, 19-20, 4:64-65) with a surfactant (3:27) oppositely charged to the base inorganic salt (1:46-60), reducing the inorganic salt particles in the column by exposing the column to a reducing agent/atmosphere to obtain nanoparticles of the corresponding inorganic material of the base inorganic salt (4:49-51), and collecting the nanoparticles (inherent).

Steinus appears to be silent to the following aspects of the invention:

- (a) use of foams or foaming surfactants
- (b) aerating the mixture to form a column of foam
- (c) allowing the foam to settle with gradual collapsing
- (d) collecting the nanoparticles by spraying with distilled water and drying the particles.

However, these aspects of the invention would have been prima facie obvious to one of ordinary skill in the art for the following reasons:

(a) Menon teaches use of foams and foaming surfactants oppositely charged to the base inorganic salt (2:45-68)

(b) Menon teaches aerating the mixture to form a column of foam (2:52-55)

(c) Menon teaches allowing the foam to settle with gradual collapsing (3:36-40)

(d) Menon teaches drying the particles (5:64). It would have been prima facie obvious to wash the particles of Steinus with distilled water in order to remove residual impurities.

It would have been prima facie obvious to one of ordinary skill in the art at the time of the invention to incorporate the method of Menon into that of Steinus because both are directed at precipitation of miron or nanometer scale particles from a salt-surfactant solution and because Menon's process would provide desirable flake morphologies, which produce optimum optical, mechanical, and thermal properties in two dimensions (1:28-30).

As to Claim 2, Menon suggests the process as suitable for aluminum salts (6:30-65). As to Claim 3, Steinus suggests chloroplatinate (2:18-41). As to Claims 4 and 5, Menon clearly suggests a foaming surfactant of sodium alkyl sulfates (5:1-10). As to Claim 6, although silent to the exact porosity of the foam, it is asserted that because Menon desires to avoid gases which could break the foam (4:60-62) and desires the ability to control the rate of gas flow (4:8-16), the particular degree of porosity would be a result effective variable that one would optimize in order to provide dry flakes at the top of the reactor column (4:14-16). As to Claims 7 and 8, both Steinus (4:55) and Menon (5:21-24) provide particles of substantially the claimed size, and it is asserted that the particles would be substantially uniform in size.

Application/Control Number: 10/814,856

Art Unit: 1732

**Conclusion** 

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Matthew J. Daniels whose telephone number is (571) 272-2450.

The examiner can normally be reached on Monday - Friday, 8:00 am - 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Christina Johnson can be reached on (571) 272-1176. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
